Prime Connection is published as a corporate communications magazine for customers and friends of Primus. The magazine is published by the Primus Marketing Department at 4180 E Sand Ridge Road in Morris, IL. To receive an email notification stating the release of the next newsletter, please email marketingdept@primuselectronics.com or call (815) 267-7402.

ILSWA GOLF OUTING 2022

This year's 15th annual summer golf outing at St. Andrews Golf & Country Club, West Chicago turned out to be another fantastic event. It was a perfect day for golf, we all beat the heat and it was a successful outing. Primus was proud to be a hole sponsor. Cady Eib (Marketing) and Sharon McDonald (Territory Manager) manned the tent allowing us to connect with friends and make new acquaintances throughout the day.

The Primus team, Doug Melander of Primus, Ryan Smith of ADB Wireless, Dan Fick of ADB Wireless and Bob Kencharek of Go Go Business Aviation took 2nd place in the Lakewood group with a score of 59 and Doug Melander also hit the longest drive of the day. Congratulations to all of you!

The Illinois State Wireless Association is a nonprofit professional association with the purpose of developing a local identity for the wireless industry within Illinois and local communities to voice a unified message toward local issues and responsibilities. In addition to providing general awareness of the wireless industry, educating customers and public officials about the wireless industry and the critical role it plays in Illinois, the Illinois State Wireless Association cultivates and fosters relationships among the members of the wireless industry and conducts fundraising for several charitable organizations.

Primus Electronics is honored to support and to be a part of this outstanding organization. We look forward to next year!

- Contributed by Sharon McDonald and Doug Melander

Newmar's Commander II Series DC Power Systems in Stock Now!

Newmar's Commander II and Commander II+ deliver next-generation microcontroller-based technology in a 6 RU or 7 RU system for wireless, telecom, and public safety. These DC power systems offer easily configurable hardware and software plus the power and performance needed to handle the most demanding applications. The Commander II+ also has built-in -48V, 12V, and 24V options, all in a single compact chassis.

Key Features:

- 19" rack mount shelf with integrated power distribution
- EM4x controller with comprehensive controls (local and web UI), data collection, and alarm monitoring/logging via v2 and v3 SNMP
- Hot swappable power bays
- Commander II: 36kW max. output capacity @ -54VDC
- Commander II+: 28.8kW max. output capacity @ -54VDC

Product is in stock now and ready to ship directly to your site!
Contact a Primus Sales representative for more information at 800-435-1636 or support@primuselectronics.com.

COMMSCOPE[®]
Microwave
Antenna
Solutions

Product Selection Guide

The design of these antennas has the advantages of reduced tower wind loading, smaller shipping volume and reduced antenna profile ensuring that the system's visual impact on the environment is kept to a minimum. The antennas satisfy the widely accepted EIA 195C and 222E standards for electrical, mechanical and structural characteristics and are backed by a 3-year warranty.

CommScope has taken the guess work out of planning a Microwave bill of materials with our handy reference of related products needed for your link design. From Waveguide to accessories this guide will clearly provide a handy reference to your Microwave product needs.

For more information, contact a Primus Sales Representative at support@primuselectronics.com or (800) 435-1636.
